

# Absolute Risks and Risk Differences for Outcomes in the CEE + MPA Trial (Intervention by Age Group)

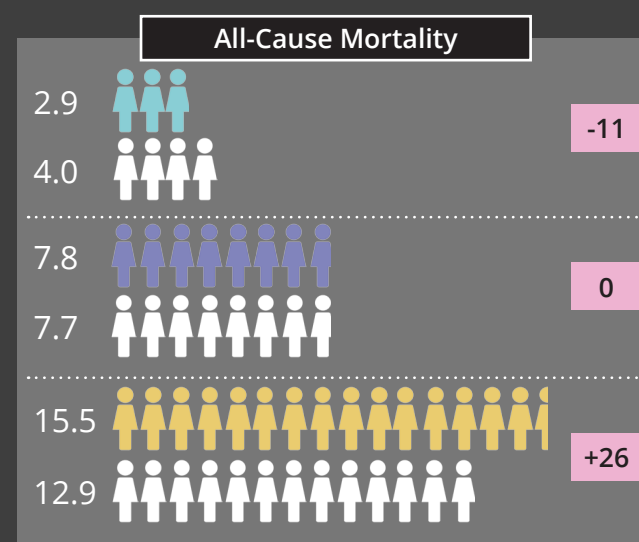

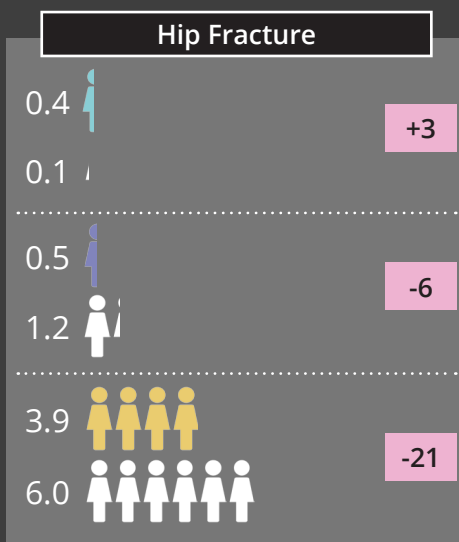

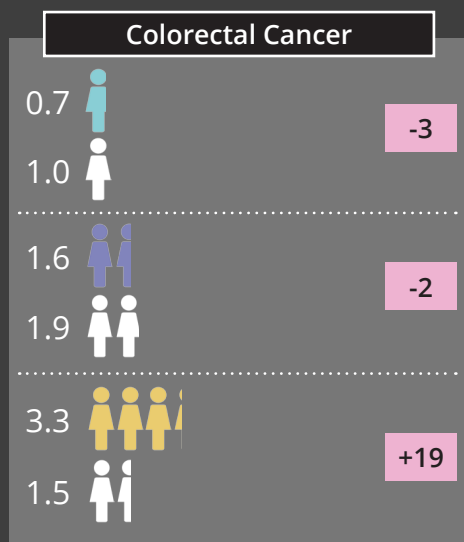

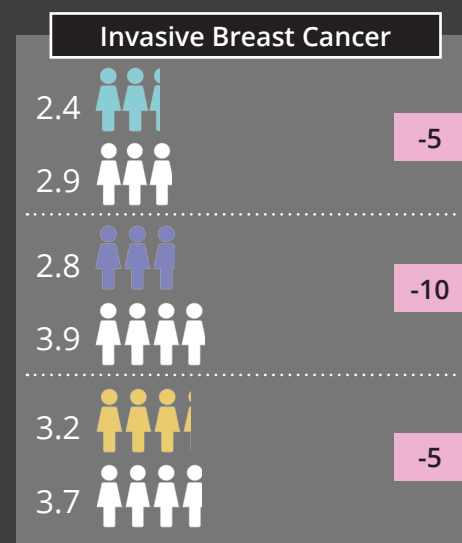

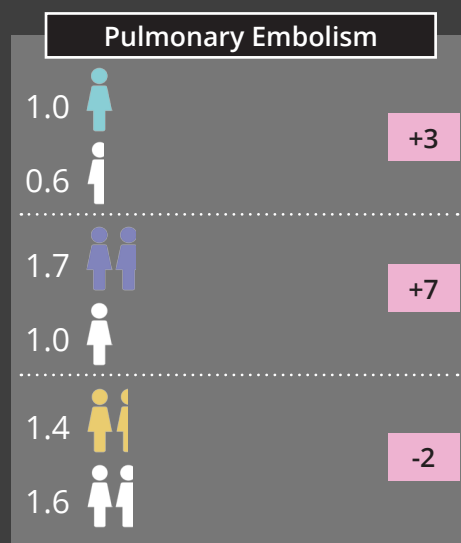

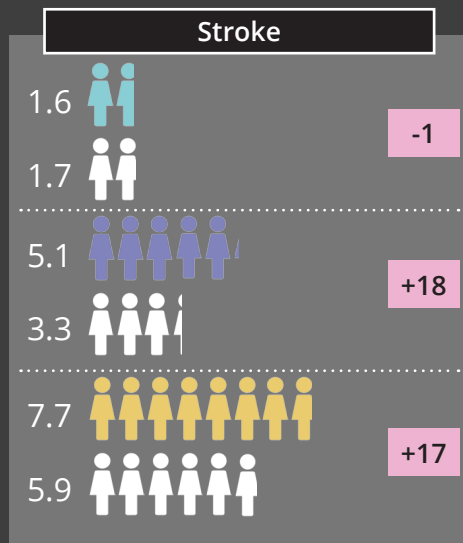

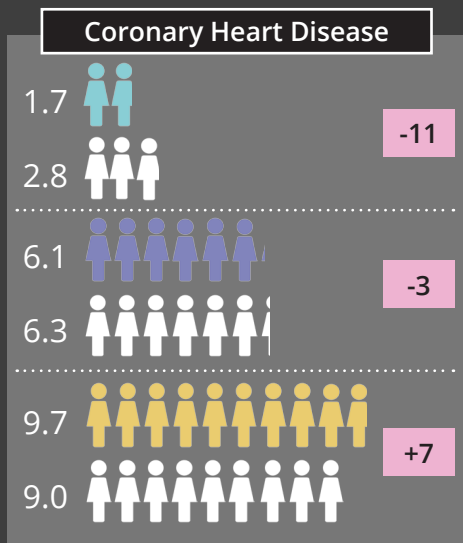

=cases per 1000 patient-years    
 Age 50-59    
 Age 60-69    
 Age 70-79    
 Placebo    
 Pink=difference active minus placebo\*

\*Difference in estimated absolute excess risk (active minus placebo). Numbers may not add up precisely due to rounding error.  
Manson JE, et al. *JAMA*. 2013;310(13):1353-1368.

# Absolute Risks and Risk Differences for Outcomes in the CEE-Along Trial (Intervention by Age Group)

=cases per 1000 patient-years    
 Age 50-59    
 Age 60-69    
 Age 70-79    
 Placebo    
 Pink=difference active minus placebo\*

\*Difference in estimated absolute excess risk (active minus placebo). Numbers may not add up precisely due to rounding error.
